

Connor Schuler
SEC-260-02
STR2026

- A) What is the HTTP Method used for this request (remember - methods are what we ask the server to do)?
 - a) **This is a POST request, includes Content-Type header which is only used for POST requests.**
- B) How can you differentiate between lines from the Header and the Body?
 - a) **The headers have “variable names” like content-type and origin before them, the body is just content.**
- C) Does this Request have a Body - if so, what is it?
 - a) **Yes, it is the string “name=cindi&email=cindi%40test.com”**
- D) If you filled out the form with your first name and favorite color and hit submit, what is the GET request that is sent to the php file?
 - a) **The request would be GET
/welcome_get.php?fname="Connor"&color="Green"**
- E) Would the request after the Submit have anything in the body?
 - a) **No, GET requests do not have a body.**
- F) What does the information after the “?” tell you?
 - a) **It tells me that the user inputted a first_name of “cindi” and a last_name of “cyber”. It also tells me it is using HTTP version 1.1 for the request.**
- G) Describe what occurs when someone fills it out and hits Submit - how does the web server know what the user filled in?
 - a) **The client sends a POST request, with the values for fname and pet included in the body of the request.**
